A proven gigabit network

GigCity Adelaide is delivered by the South Australian Broadband Research and Education Network (SABRENet), an established and proven fibre optic broadband network linking Adelaide's major research, innovation and education sites, and EscapeNet, a leading Adelaide-based internet service provider.

The SABRENet fibre optic cable extends over 400km and connects more than 200 education, research and innovation locations across South Australia, including university campuses, research precincts, teaching hospitals, TAFE campuses and schools. It is the backbone of South Australia's thriving innovation and entrepreneurial businesses and institutions.

With the support of the Government of South Australia, GigCity Adelaide has been expanded to connect key locations, including Lot Fourteen – Adelaide's new innovation neighbourhood, Tonsley – Australia's first innovation district, and the Osborne Naval Shipbuilding precinct – the centre of naval shipbuilding in Australia.

Businesses in GigCity precincts can access the GigCity Adelaide network and ongoing technical support by contacting EscapeNet. A full list of locations can be found on the GigCity website.

GigCity plans are flexible with no set-up costs and no lock-in contracts.

GigCity Adelaide provides affordable internet pricing plans to suit all businesses. From as little as \$49.90 per month, start-ups and established businesses can access speeds of one gigabit per second, symmetrical.

Customers can also get direct access to cloud-based services and connect to leading South Australian data centres at speeds of up to ten gigabit per second. This means you can host your equipment in a secure and managed environment, providing you with flexibility and options to take on future global industry with confidence.

No set-up charges or lock-in contracts.
All costs per month. Prices include GST.

GigCity Adelaide – Australia's first GigCity

GigCity Adelaide is an ultra fast and affordable 10 gigabit network – directly linking innovation precincts across Adelaide.

In an ever-changing modern economy, access to fast and reliable internet and cloud connections is a must-have for any business or startup. But often, affordable high-speed services can be out of reach.

GigCity Adelaide is changing that.

With user access speeds of up to 10 gigabits per second (Gbps), GigCity Adelaide provides an ultra-fast and low-cost fibre optic network to help South Australian businesses develop leading-edge ideas, create new opportunities and access global markets.

GigCity plans are flexible with no set-up costs and no lock-in contracts.

Success story

RHS

Adelaide company RHS is embracing a new gigabit future as connection to high speed internet takes their upload and download file times from days to minutes.

Founded in 2007, RHS develops advanced single cell genomic technologies to improve health and research outcomes across a range of applications, including IVF, cancer, forensics and ancient DNA. Based at the Thebarton biotechnology precinct, the company employs 12 people.

CEO and Managing Director Michelle Fraser said connecting to the GigCity network has made a huge difference to the way the company operates.

“RHS works with large data files to support clinical investigations, applied research and product development. Each of those data files is two to three gigabytes in size,” says Michelle.

“With our previous internet connection, the download and upload speeds were at six megabits per second, which was hugely time consuming for our scientists. And very often, the system would crash so we would need to start again.

“We also use GigCity for video teleconferencing and online courses, which we deliver on a global scale.

“Our competitors are significantly larger overseas businesses, and GigCity has been an important addition to help RHS maintain its professional image and complement our branding of being high tech and globally competitive.

“Connecting to GigCity is a real competitive advantage, especially for smaller businesses that have limited infrastructure and internal resources,” Michelle says.
